

ABSTRACT

[057] A system, method, and computer readable medium adapted to transmit a signal, comprises a receiver adapted to receive a first signal and produce a buffered signal; a transform adapted to produce pulses and index segments based on the buffered signal, wherein the transform is coupled to the receiver; a collection module adapted to receive and store the pulses and the index segments; and a transmitter adapted to transmit at least one of a following data from a group consisting of: the produced pulses and index segments; and the stored pulses and index segments.
